

How to Clear your Cache (ONLY) on any browser

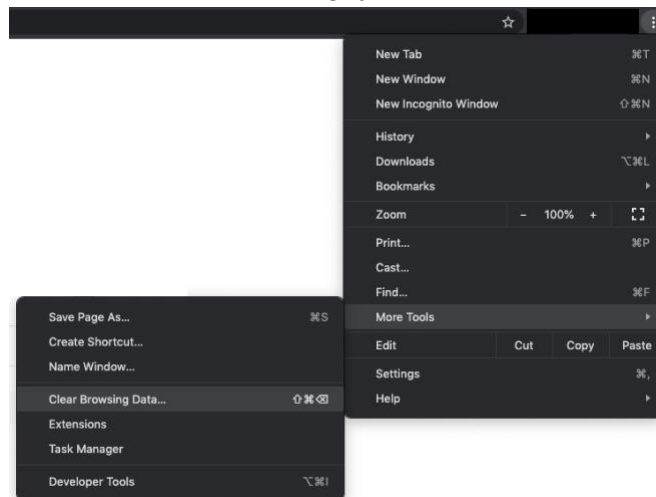

All browsers hold cached sites/content in order to help speed up the delivery for return users. Sometimes this cache contains old content that creates an issue for the user because of updates made to the site. Clearing this cache should help resolve those issues by telling the browser to look for new/updated content and files.

In most browser cache control windows, there will be options as to what you want to clear and the length as which to clear from your browser. For this explanation, you will **ONLY** want to clear **CACHE**, not the other options, and for the entire length of history.

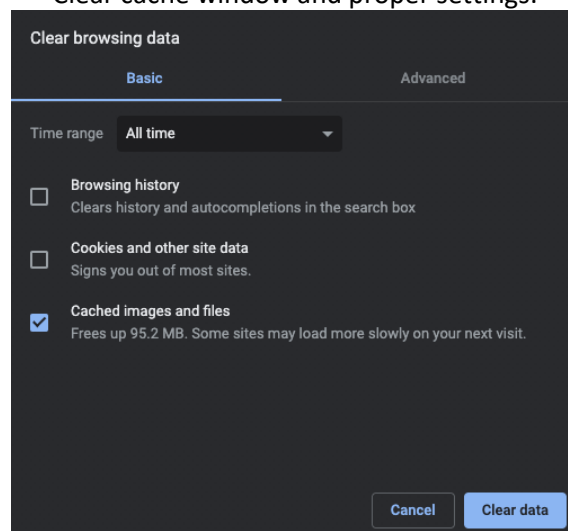

Chrome

Keyboard Shortcut: Command/Control + Shift + Delete

Menu:

Clear cache window and proper settings:

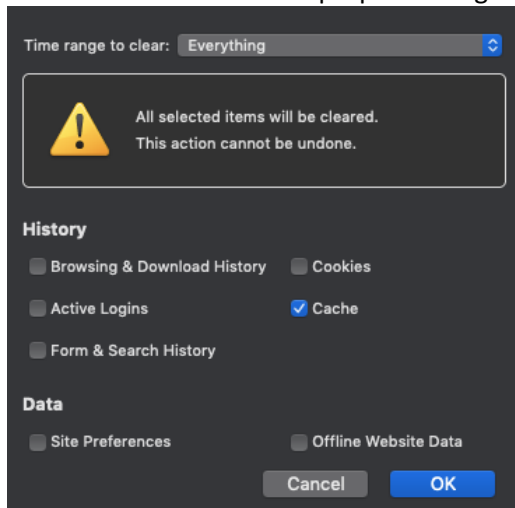

Firefox

Keyboard Shortcut: Command/Control + Shift + Delete

Menu:

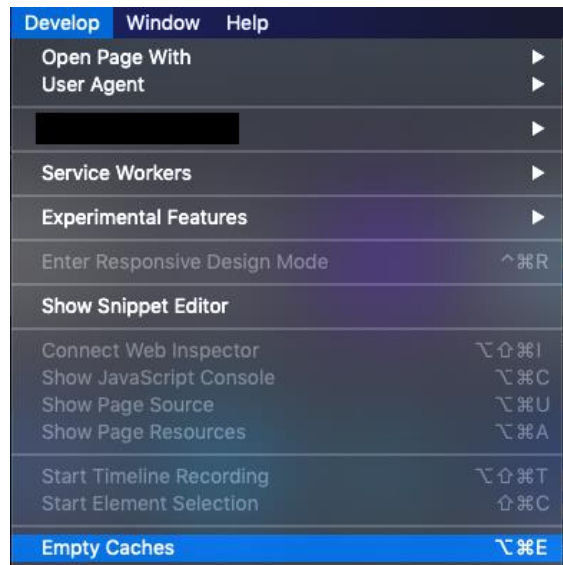

Clear cache window and proper settings:

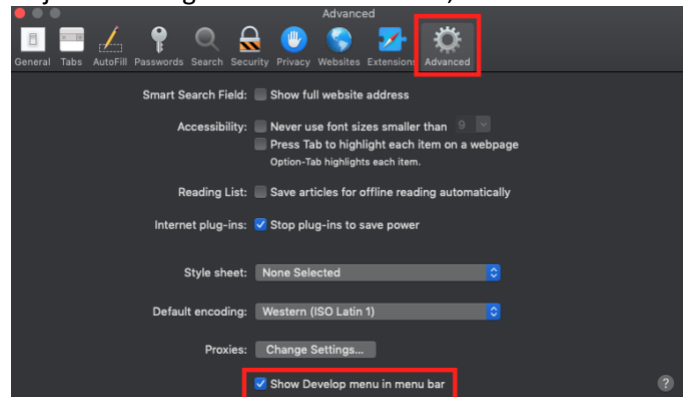

Safari
